Zero action, seed 42, env 0/8; first episode only
Base orientation
roll
pitch
deg
simulation time (s)
COM vs normal reaction center
COM x
normal-force CoP x
m (initial yaw frame)
simulation time (s)
Active contact hull margin
min signed edge distance
m
simulation time (s)
Foot vertical forces (20 ms samples)
left foot
right foot
N
simulation time (s)
Ankle tracking error
L ankle pitch
R ankle pitch
rad
simulation time (s)
Different torque signals
L PD estimate
L incoming projection
actuation input buffer
Nm
simulation time (s)
